

Capability Statement

Company Overview

Australian Pipeline Management Pty Limited (APM) provides quality pipeline maintenance and rehabilitation services of underground assets located in Sydney, Australia.

Established in 2018, our company has the skills, expertise and technology to undertake underground inspection, maintenance and rehabilitation services. We have a range of specialised vehicles and equipment to carry out our services.

We specialise in sewer and stormwater management. Our technology can inspect, maintain, expose and repair underground assets, eliminating the need for dig and replace.

Our company performs all its business activities in a way that ensures a safe and healthy environment for all employees, Clients and the public.

Australian Pipeline Management Pty. Limited is proud to have collectively over 30 years of experience within our team.

Our Purpose

Australian Pipeline Management maintains stormwater and sewer systems for optimal efficiency.

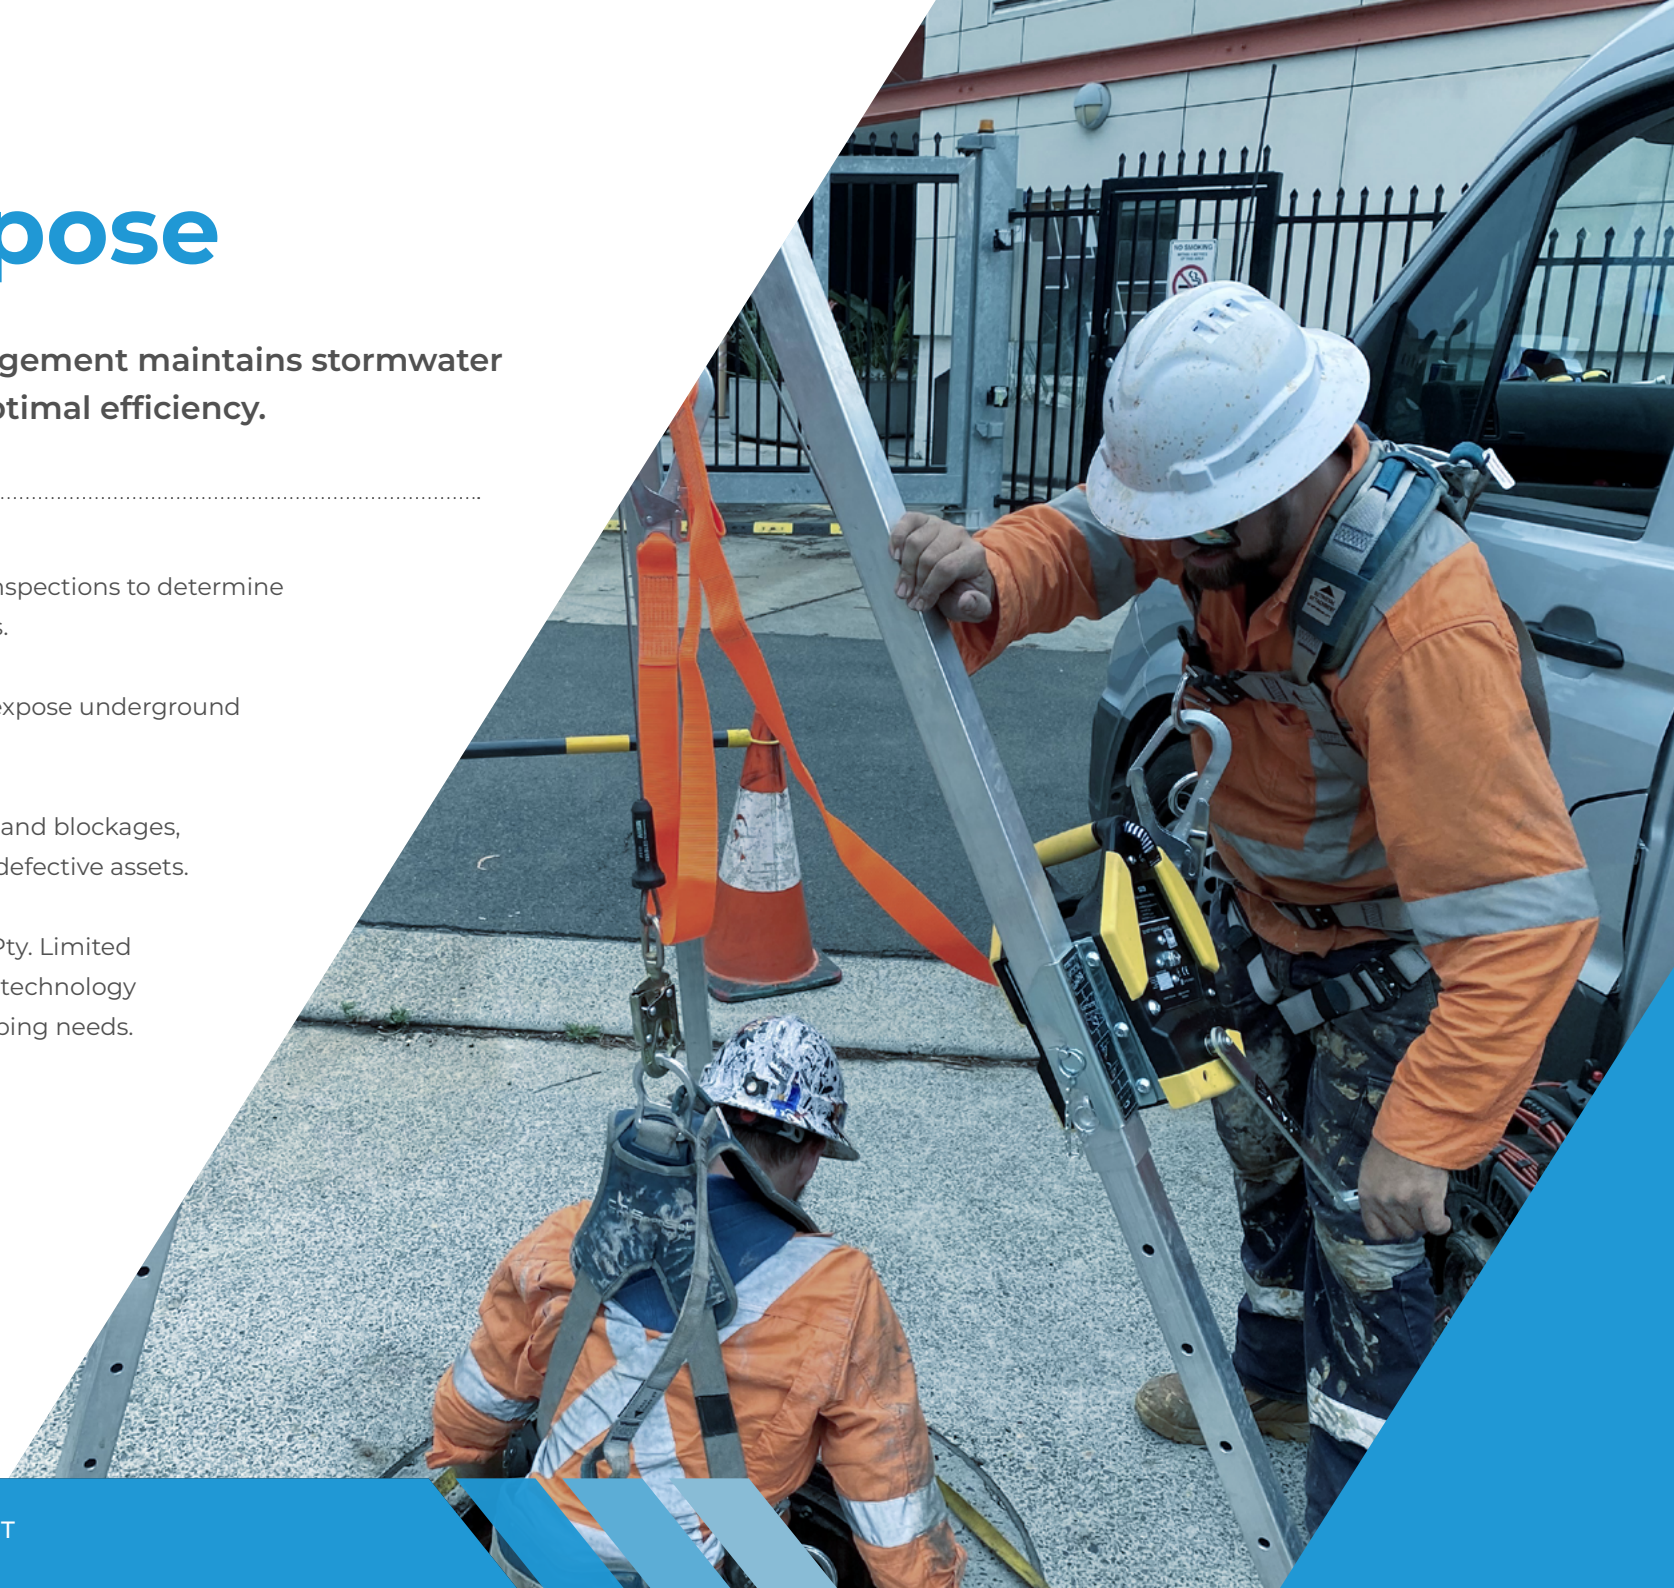

We can conduct comprehensive inspections to determine the structural condition of systems.

Above ground we can locate and expose underground assets using high pressure water.

Below ground we can clear debris and blockages, inspect pipelines and rehabilitate defective assets.

Australian Pipeline Management Pty. Limited is continuously incorporating new technology to best cater to our Client's developing needs.

We strive to minimise the need to dig and replace and ensure minimal disruption.

Our Services

Preventative maintenance is a key component keeping your sewer and stormwater systems working smoothly.

✓ CCTV Inspection And Reporting

Our robotic camera systems can inspect and survey the structural condition of your pipeline network. Following the inspection, a comprehensive report as per the WSA Code is issued with video footage.

✓ Drain And Pipe Cleaning

Our Recycler and Vacuum/Jetting combination units use high pressure water to remove any debris, roots and blockages. Our units can transport the waste to licensed waste disposal facilities.

✓ Non Destructive Excavation

Non destructive excavation is a safe and effective method of exposing underground assets using high pressure water without the need for mechanical digging. Remediation of site can be carried out where required.

✓ Trenchless Pipeline Rehabilitation

In the event of a defect or potential collapse, we can provide trenchless rehabilitation using point repairs or lining methods to avoid the need to dig and replace and restoring hydraulic capacity.

✓ Pipe And Cable Locating

Specialised equipment is used to locate underground assets when there is a need to carry out repairs, obtain a service report, conduct maintenance and provide pre excavation and pre construction checks.

✓ Robotic Grinding

With a range of robotic systems we can carry out grinding and cutting in a pipeline to remove defects and obstructions such as concrete, roots, rubber rings or reinstating junction or connection points.

Industries **We Serve**

Australian Pipeline Management Pty. Limited has the necessary range of vehicles and equipment to cater to a wide range of industries no matter how large or small the project is.

We work with our Clients on a wide range of project types including, but not limited to, commercial and residential developments, road projects and upgrades, Council maintenance programmes and rail projects.
